

PROVEN 3-STEP PROCESS

TO REMOVE DIFFICULT TOBACCO AND CANNABIS ODORS

Follow these 3 steps to quickly neutralize tobacco and cannabis smoke odor molecules - **even heavy smoke residue!**

(Refer to product label or User Guides for specific instructions.)

STEP 1 Apply Tabac-Attack

Remove tobacco or cannabis odors with ODORx™ **Tabac-Attack**, which works at the molecular level to neutralize and effectively deodorize both hard and soft surfaces affected by tobacco odors. Use water-based **Tabac-Attack** as an additive in upholstery, carpet cleaning and hard surface cleaning solutions. Apply **Tabac-Attack** with carpet cleaning equipment or sprayers. You can also use **Tabac-Attack** to launder affected fabrics.

STEP 2 Thermal-fog

Thermal-fog with the **Tabac-Attack** formulation of **Thermo-55**: This powerful heat-activated odor counteractant uses highly purified petroleum solvents and odor control essential oils to create a vapor barrier that prevents tobacco-related malodors from permeating living spaces. Note: Use **Thermo-55** with the **Electro-Gen** Thermal Fogger or **Thermo-Gen VF** Fogger.

STEP 3 Clean Up

Clean with **Degrease-All** and **Tabac-Attack**: **Degrease-All** is a highly effective, versatile general purpose cleaner for greasy soils and particulates that cleans without harsh fumes. You can use **Degrease-All** and **Tabac-Attack** together to tackle tobacco odors on *high-gloss or semi-gloss paint*, metal, and hard or soft surfaces.

Or clean with **Unsmoke™ Wall Wash** (with BioSolv) and **Tabac-Attack**: **Wall Wash** contains proprietary brightening and deodorizing agents to clean smoke-damaged hard surfaces and it is ready to seal or paint when dry. Use **Wall Wash** with **Tabac-Attack** to deodorize *flat or semi-gloss painted walls*.

SUCCEED WHERE OTHERS HAVE FAILED WITH THE ODORX™ PROVEN 3-STEP PROCESS

When sticky tobacco residues accumulate, the resulting film on interior building surfaces continually release malodors. Heavy smoking over a long period of time causes stubborn and severe smoke odors. **This proven system is the key to successful tobacco odor and removal.**

USE A HEPA AIR SCRUBBER

When removing odors, use a **Dri-Eaz® HEPA 500 air scrubber** with an activated carbon filter to remove volatile organic compounds (VOCs), including tobacco, smoke or food odors, fumes from paint and paint thinners, and sewer and other noxious odors.
